Abstract

Launched in 2014, the National Science Review (NSR) is a multidisciplinary scientific journal released in English in China that is aimed at linking the country's rapidly advancing community of scientists with the global frontiers of science and technology. The journal covers all areas of the natural sciences, including physics and mathematics, chemistry, life sciences, earth sciences, materials sciences, and information sciences. With an impact factor of 9.408 in 2017 and a predicted impact factor of 12 in 2018, the journal highlights the latest scientific and technological development in and outside China that are of central importance to the international community. All articles published in NSR are free to read (<https://academic.oup.com/nsr>). This talk will focus on the journal's introduction, in-house editorial and peer review process and the editor's insights.
